

## Faraday U

The Faraday U is the counterpart to the Maxwell U and, like it, capable of pushing apparent boundaries in the reproduction of music. This is „immersive sound“ without spectacular effects. Music is reproduced liquid and always integrated as a whole, but spectacularly spatial, colourful, dynamic and detailed.

Whether it's a large orchestra or an art song, a jazz trio or a rock band, music has never sounded more natural, more exciting, more moving via a MusiCable. Immerse yourself in the music with Faraday U, experience your favourite music in a new way, regardless of whether it was produced audiophile or recorded historically. Because even with poorly produced recordings, Faraday U lets you hear through to the core of the music. Faraday U sets the stage for your concert.

To achieve this, we process the finest materials, mostly by hand, to create a cable in which every detail has been examined and fine-tuned for its sonic properties. From the actual conductor to the construction to details such as the leather-covered and thus lightly damped plugs, everything serves the goal of the most natural reproduction possible for an intensive experience of music.

Technical Data	Faraday U – Loudspeaker Cable
Capacitance	ca. 290 pF/m
Inductance	ca. 0.1 µH/m
Loop resistance	<10 mOhm/m
Connections	silver-plated 6/8mm spades or Audioplan pure copper bananas
